3D views on cool stellar atmospheres: theory meets observation

Joint Discussion 10, IAU General Assembly, Rio de Janeiro, August 10-11, 2009

editors: K. N. Nagendra, P. Bonifacio and H.-G. Ludwig

TABLE OF CONTENTS

Index 601

Foreword 604

The hydrodynamical approach to stellar atmospheres

M. Carlsson
Hydrodynamics and radiative transfer of 3D model atmospheres 606

D. Dravins
Highest-resolution spectroscopy at the largest telescopes? 614

I. Ramírez, C. Allende Prieto, D. L. Lambert, L. Koesterke and M. Asplund
Granulation across the HR diagram 618

C. Allende Prieto, L. Koesterke, I. Ramírez, H.-G. Ludwig and M. Asplund
Accounting for convective blue-shifts in the determination of absolute stellar radial velocities 622

A.M. Seelmann and P.H. Hausschildt
3D radiative transfer with continuum and line scattering in low arbitrary velocity fields 627

L. S. Anusha and K. N. Nagendra
Projection methods for line radiative transfer in spherical media 631

3D views of the Sun

S. Wedemeyer-Böhm and L. Rouppe van der Voort
The solar continuum intensity distribution 635

V. M. J. Henriques and D. Kiselman
Temperature stratification in the Sun's photosphere in high horizontal resolution using Ca II H filtergrams 639

E. Caffau, H.-G. Ludwig and M. Steffen
Solar abundances and granulation effects 643

T. S. N. Pinto and J. E. R. Costa
Computation and analysis of gyrosyncrothron emission in solar flares 647

T. M. D. Pereira, M. Asplund and D. Kiselman
Testing 3D solar models against observations 650

P. Zacharias, S. Bingert, H. Peter
Doppler shifts in the transition region and corona 654

3D views of atmospheres of planets and sub-stellar objects

A.J. Burgasser
Cloud formation and dynamics in cool dwarf and hot exoplanetary atmospheres 658

M. Wagner and P. H. Hauschildt
Reflectance spectra of earth-like exoplanets 667

B. Freytag, F. Allard, H.-G. Ludwig, D. Homeier, and M. Steffen
Simulations of dust clouds in the atmospheres of substellar objects 670

R. L. Smart
Brown dwarf parallax programs 674

Polarization

K. N. Nagendra, L. S. Anusha and M. Sampoorna
Polarization : proving ground for methods in radiative transfer 678

J. O. Stenflo
Magnetic structuring at spatially unresolved scales 690

M. Sampoorna
Modeling the second solar spectrum 696

Applications of 3D models to stellar astrophysics

F. Kupka
3D stellar atmospheres for stellar structure models and asteroseismology 701

H.-G. Ludwig, E. Caffau, M. Steffen, B. Freytag, P. Bonifacio and A. Kučinskas
The CIFIST 3D model atmosphere grid 711

K. Ohnaka
Spatially resolving the inhomogeneous structure of the dynamical atmosphere of Betelgeuse with VLTI/AMBER 715

R. Collet, Å. Nordlund, M. Asplund, W. Hayek and R. Trampedach
Abundance analysis of the halo giant HD 122563 with three-dimensional model stellar atmospheres 719

A. Kučinskas, H.-G. Ludwig, E. Caffau and M. Steffen
3D hydrodynamical simulations of stellar photospheres with the CO5BOLD code 723

L. Casagrande
The effective temperature scale: resolving different versions 727

M. Steffen, H.-G. Ludwig and E. Caffau
Micro- and macroturbulence derived from 3D hydrodynamical stellar atmospheres 731

N.T. Behara, H.-G.Ludwig, P. Bonifacio, L. Sbordone, J.I. González Hernándezi and E. Caffau
3D molecular line formation in dwarf carbon-enhanced metal-poor stars 735

P. Bonifacio, E. Caffau and H.-G. Ludwig
Effects of granulation on neutral copper resonance lines in metal-poor stars 739

M. Weber, T. Carroll, T. Granzer, M. Steffen and K. G. Strassmeier
Monitoring mass motions of Betelgeuse's photosphere using robotic telescopes 743
